

# EcoPulse AI Executive Summary

Integrated Smart-City Environmental Intelligence

## 1. AI-Generated Environmental Insight

The EcoPulse AI system has detected a daily AQI baseline of 408.0. Analysis shows a peak pollution interval around 14:13, driven primarily by low-level wind dispersion and traffic congestion. Our predictive engine suggests that atmospheric stagnation will persist for the next 4 hours. Strategic recommendation: Implement dynamic traffic diversion in Zone B to reduce the local load by 15%.

## 2. Detailed Analytics Log

Timestamp	AQI	Health Index	Primary attribution
14:13:41	453.4	0.0	Traffic: 51.7%   Wind: 12.0%
14:13:42	453.8	0.0	Traffic: 51.8%   Wind: 12.0%
14:13:43	453.4	0.0	Traffic: 51.7%   Wind: 12.0%
14:13:44	454.0	0.0	Traffic: 51.8%   Wind: 12.0%
14:13:45	455.1	0.0	Traffic: 51.9%   Wind: 12.0%
14:13:46	456.8	0.0	Traffic: 51.8%   Wind: 12.0%
14:13:47	457.2	0.0	Traffic: 51.7%   Wind: 12.0%
14:13:48	458.2	0.0	Traffic: 51.8%   Wind: 12.0%
14:13:49	456.9	0.0	Traffic: 51.7%   Wind: 12.0%
14:13:50	458.2	0.0	Traffic: 51.7%   Wind: 12.0%
14:13:52	456.3	0.0	Traffic: 51.8%   Wind: 12.0%
14:13:53	457.6	0.0	Traffic: 51.8%   Wind: 12.0%
14:13:54	456.7	0.0	Traffic: 51.9%   Wind: 12.0%
14:13:55	456.7	0.0	Traffic: 51.9%   Wind: 12.0%
14:13:56	457.2	0.0	Traffic: 51.9%   Wind: 12.0%

### Strategic Municipal Action Items:

- Execute 'Green Pulse' traffic protocols in high-density corridors.
- Deploy automated alert notifications to registered sensitive citizens.
- Increase frequency of urban street misting in Sector 4.

# EcoPulse AI Executive Summary

*Integrated Smart-City Environmental Intelligence*

- Validate industrial emission compliance for outliers in Zone A.
